

Student Time Management Guide

1. Planning Academic Work

Time management begins with understanding what needs to be completed and when it is due. Students can list assignments, exams, projects, and other commitments before creating a weekly plan.

- Record deadlines in one place.
- Estimate how much time each task will require.
- Break large assignments into smaller tasks.

2. Prioritizing Tasks

Not every task has the same urgency or importance. Prioritizing helps students decide what should receive attention first.

- Complete tasks with approaching deadlines first.
- Give adequate time to major assignments and projects.
- Avoid postponing important work simply because smaller tasks are easier.

3. Avoiding Procrastination

Procrastination can make academic work feel more difficult because several deadlines may accumulate at the same time. Starting with a small, clearly defined task can make it easier to begin.

- Set a short starting goal, such as working for 15–20 minutes.
- Reduce distractions during focused study periods.
- Use short breaks between periods of concentrated work.

4. Balancing Responsibilities

A realistic academic schedule should also allow time for sleep, meals, personal responsibilities, and breaks. A schedule that leaves no recovery time may be difficult to maintain.

- Plan study periods around existing commitments.
- Keep regular breaks in the schedule.
- Review the weekly plan and adjust it when priorities change.
